

3DAM has crossed Moore's Technology Adoption chasm

- 3DAM has progressed from early adoption of small prototype runs into the full manufacturing specter of early majority users
- Advances continue in materials development, equipment capability and process controls, and design versatility to leverage 3DAM advantages, although system cost reductions and repeatability are still needed for broad industrialization
- Cooperative, integrated developments along the value chain and the IoT are serving as adoption accelerators
- 3DAM will continue to grow as a segment of the overall \$12 trillion manufacturing sector. The freedom it allows to rethink manufacturing and design differently enables more high volume and demanding applications in a “Factory of the Future” concept to open up
